

Farah Mohamed

Gatineau, QC | mohameffarah1@gmail.com | [LinkedIn](#) | [Github](#) | [Portfolio](#)

EDUCATION

Université de Montréal

Computer Science (B.Sc.)

Montréal, QC

Graduation: May 2026

EXPERIENCE

CAE Immersion – Enterprise Training Program

CAE Inc.

May 2026 – June 2026

Montreal, QC

- Trained in Agile methodology, Design Thinking and simulation platform architecture over a 3-week enterprise program, learning how a large engineering organization takes a product from idea to release.

Software Analyst and Developer Intern

CAE Inc.

March 2026 – April 2026

Montreal, QC

- Used C#, .NET and Unity with the Meta XR SDK to build and ship a virtual reality flight simulator, so trainees could rehearse cockpit procedures without booking a real aircraft.
- Integrated a REST API for real-time voice input and output, so a user could operate the simulator by speaking plain commands instead of hunting for the right control.
- Used Git, GitHub and AI-assisted tools (GitHub Copilot, Claude Code) to build and debug features on an Agile team, and wrote the technical documentation, revising it on senior feedback.

Security Analyst

Canada Revenue Agency (CRA)

July 2024 – June 2025

Ottawa, ON

- Used identity and access management to review about 30 requests a day for accounts and permissions at a federal agency, granting or redirecting each one so people only held the access their job required.
- Applied an internal security framework and Excel reporting to classify sensitivity, escalate high-risk cases to senior analysts with written findings, and track approval and denial rates every week.

PROJECTS

Community Project Platform | *Next.js, React, TypeScript, Tailwind CSS, Prisma, PostgreSQL, Vercel* [Github](#) | [Site](#)

- Used Next.js, React, TypeScript and Tailwind CSS to build a site that runs community projects the way open source runs software, so anyone can see what needs doing and who did it.
- Modelled projects, contributors and tasks in PostgreSQL through Prisma and deployed on Vercel with next-intl translations, so French and English communities share one task board.

AI Search Visibility Audit | *Next.js, React, TypeScript, Node.js, Tailwind CSS, Firecrawl, Google GenAI* [Github](#) | [Site](#)

- Used TypeScript, Node.js and Next.js server routes to build a web app that checks whether AI assistants name a business when a customer asks them for a recommendation.
- Called the Google GenAI and Firecrawl REST APIs to rank the 50 real companies a query returns and hand back a JSON list of copy-paste fixes a web developer can apply the same day.

PLUMB | *Python, FastAPI, REST API, JavaScript, React, Three.js, HTML, CSS, MCP, Gemini* [Github](#)

- Used Python, FastAPI and React to build a tool that automatically fixes 3D scenes made by AI, catching objects that float, overlap or block doorways, earning 2nd place at MPC Hacks.
- Exposed the physics checks as a REST API and an MCP function an AI agent can call to validate a placement and get back the exact correction, removing the manual cleanup pass.
- Built the interface with JavaScript, Three.js, HTML and CSS so users can drop in 3D models, set their own rules and see in real time which objects pass or fail.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, HTML, CSS, Python, Java, SQL, C#/.NET

Frontend: React, Next.js, Tailwind CSS, Three.js, Responsive UI

Backend & APIs: Node.js, REST API, FastAPI, Django, Prisma, Object-Oriented Design

Databases: PostgreSQL, MongoDB, Redis, Data Modeling

Cloud & DevOps: Vercel, AWS, Azure, Docker, Git, GitHub Actions, CI/CD

Spoken: French (Native), English (Fluent)
